

Arcrete LS

TECHNICAL DATA SHEET

Product: Arcrete LS

Chemical Name: Salt of Lignosulfonic acid

Formula: C₂₀H₂₄Na₂O₁₀S₂

CAS-Number: 8061-51-6

#	PARAMETER	VALUE
1.	Appearance	Powder from light to dark brown
2.	Basic substances content, %, min	66.0
3.	Dry substances content, %, min	93.0
4.	Ash content, %, max	5.0
5.	pH value, (+/-2)	7.0
6.	Reducing substances content, %, max	3

Application: Can be used in the cement and concrete industries as a cement softener and binding material, in foundry, in the chemicals field, in the oil industry in drilling, in ceramics industry, and in several other applications.

Disclaimer. All information to be used as reference only. Final confirmed information will be provided in the sales contract/proforma invoice for specific orders. For safety information please always refer to the latest MSDS or other appropriate information source, concerning the material in question.
